

Description:

The Green Technology, Sustainability & Environmental career field exposes interns to our world's impact on the environment and how we can use technology to reduce the imprint that humans leave behind. Green technologies play a significant role in shifting many nations globally towards a sustainable economy and providing alternative solutions to present and future generations in order to live in a clean and healthy environment. Interns in this career field may find themselves working within renewable energy, solar energy, electric vehicles, and more.
